

Corps sign standards are contained within a separate set of comprehensive sign standards manuals (EP310-1-6A and EP310-1-6B). The manuals include design methodology and visual standards for identification, directional, informational, instructional, safety and interpretive signs. Also included are guidelines for sign legends, specifications for materials and fabrication, and information on the establishment of a sign maintenance program.

Contact the Graphic Standards Coordinator, HQUSACE, CEIM-IV, for advice and assistance on sign development or a set of the sign standards manuals.
